7746969534 | akshaykalapgar23@gmail.com | akshaykalapgar.com | linkedin.com/in/akshaykalapgar | github.com/Akkikens

Summary

Full-Stack Software Engineer with 3+ years of experience building production web applications and, more recently, AI-powered products—agents, tool integrations, and automation systems. Comfortable owning a feature end to end: frontend, backend, infra, and the deployment pipeline in between. I like picking up new stacks quickly and shipping things that hold up under real usage.

Core Competencies

Full-Stack Web Development · AI Agents & LLM Integrations · REST & GraphQL APIs · Cloud Infrastructure (AWS/GCP) · Kubernetes & Docker · CI/CD Automation · Observability · Distributed Systems · Python · TypeScript

Education

Master of Science in Computer Science — Clark University, Worcester, MA

GPA 3.8, May 2025

Bachelor of Engineering, Information Technology — University of Mumbai

GPA 3.6, June 2021

Technical Skills

Languages: Python, TypeScript, JavaScript, Java, SQL, C++

Frontend: React, Next.js, Redux, Material UI, HTML/CSS

Backend: Node.js, FastAPI, Django, Spring Boot, REST APIs, GraphQL, PostgreSQL, Redis

AI/ML: Claude Code, Anthropic Claude API, OpenAI API, LangChain, Prompt Engineering, Function Calling

Infrastructure: AWS (Lambda, EKS, S3, Secrets Manager), GCP, Kubernetes, Helm, Terraform, Docker

Observability & Tools: Datadog, OpenTelemetry, Prometheus, Sentry, PostHog, GitHub Actions, Git, Jira

Work Experience

Full Stack Developer & AI Engineer

@ Climb Together; San Francisco, United States

May 2025 – Present

- Built Goldi, a production AI career-coaching agent, using Anthropic Claude, OpenAI, and LangChain with custom tool calling and multi-turn conversation handling.
- Added a voice mode using Hume AI with natural interruption handling and tone-adaptive pacing; shipped to 100K+ users through a Walmart partnership.
- Designed the multi-playlist navigation architecture, including URL state, race-condition fixes, and caching for a smoother user experience at scale.
- Built a WhatsApp + SMS consent and onboarding flow that lifted re-engagement by 28%.
- Built a Chrome extension (MV3 side panel, content script, auth bridge) to bring the agent into LinkedIn.
- Set up CI/CD with automated testing, plus Sentry for error tracking and PostHog for product analytics.

AI Platform Engineer (Contract)

@ Softmax Inc; San Francisco, United States

Nov 2025 – Apr 2026

- Built and maintained internal Claude Code plugins (86 skills across 6 plugins) that automated PR review, code generation, and multi-file edits for the engineering team.
- Set up an observability pipeline with Datadog and OpenTelemetry, replacing legacy monitoring for a multi-agent RL training platform.
- Built a Kubernetes watcher service that auto-classified job failures (timeout/OOM/policy errors) and reconciled stuck jobs.
- Wrote Terraform for the AWS infrastructure (Lambda, Secrets Manager, IAM) behind our GitHub webhook integrations.
- Owned the database layer—a 21-table PostgreSQL schema with Alembic migrations and pre-deploy Helm jobs for zero-downtime releases.
- Shipped 1,180+ commits to Metta AI, an open-source multi-agent RL platform (github.com/Metta-AI/metta).

Software Engineer Intern

@ UMass Chan Medical School; Boston, United States

May 2024 – Jan 2025

- Led the rebuild of Factorbook 2.0 with React, Next.js, and GraphQL, improving first contentful paint by 40% and API latency by 55%.
- Added real-time dashboards with Prometheus to monitor job queues and system health.
- Wrote 500+ unit and integration tests with Jest and Playwright, keeping coverage above 98%.
- Migrated the backend to serverless (AWS Lambda), cutting cold-start latency by 50% while holding 99.9% uptime.

Full Stack Engineer

@ Capgemini; Mumbai, India

August 2021 – August 2023

- Built 10+ microservices in Java and Spring Boot for BMW's global platform, serving 200K+ users at 99.9% uptime.
- Owned CI/CD pipelines with Jenkins and Docker, cutting manual deployment work by 70%.
- Mentored 4 junior developers across two agile squads and ran peer code reviews.

Software Engineer

@ tag8; Mumbai, India

August 2020 – August 2021

- Added Redis caching and Elasticsearch to a Django backend, cutting DB query latency by 60% for real-time dashboards.

Certifications

AWS Certified Developer Associate (2024) · AWS Certified Cloud Practitioner · IBM Applied AI · IBM Data Science · Open Source Software Development, Linux and Git · Google Cloud
